EXPERIMENT 15

Career pathways and future of low code

Aim

Connect the Vehicle Service Command Center project to career roles and likely future developments.

Procedure

1. Identify roles the project demonstrates: business analyst, low code developer, integration developer, QA/administrator, solution architect.
2. For market-specific claims, use current job postings; record employer, role, location, date and skills. Do not infer salary or demand from product docs.
3. Map each role to portfolio evidence from this record; prepare a sanitized demo: data model, one workflow, one denied-access test, one recoverable integration failure, release checklist.
4. Write the report and the eight-slide outline; rehearse a five-minute explanation.
5. Label forecasts as reasoned expectations, not guarantees.

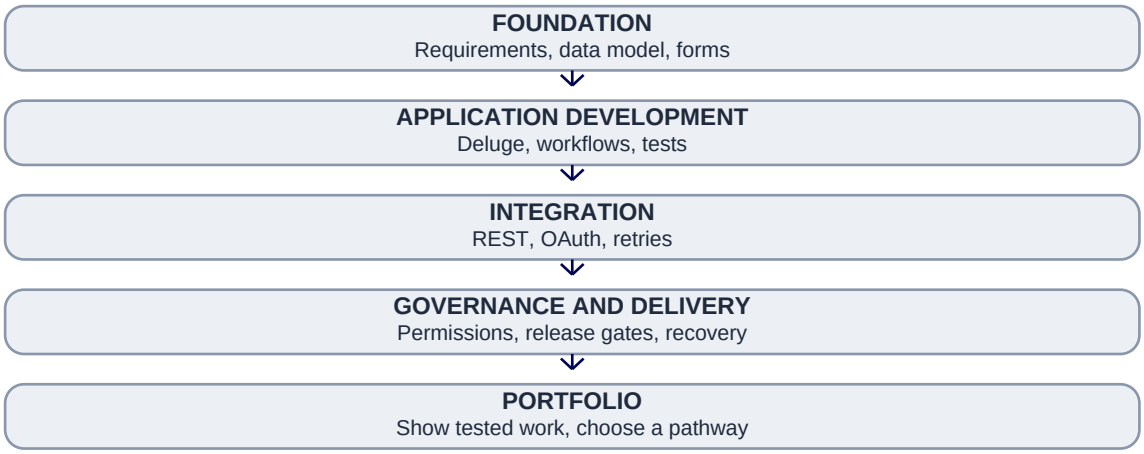
Implementation and verification

Pathway	Skills to develop	Portfolio evidence
Low code developer	Data models, Deluge, forms	Experiments 4 to 6
Business analyst	Requirements, process mapping	Experiments 1 and 3
Integration developer	REST, OAuth, retries	Experiments 7 and 14
QA / administrator	Testing, permissions, recovery	Experiments 8, 11, 12
Solution architect	Tradeoffs, scale, governance	Experiments 10 and 13

Evidence and testing

E15: report, slides or notes, source log, honest skills self-assessment. Slides: 1 Problem and goals; 2 Architecture; 3 Data model and demo; 4 Validation and negative tests; 5 Integration and recovery; 6 Security and governance; 7 Career skill map; 8 Future outlook and learning plan.

Process diagram



Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. Report and presentation tie career choices to demonstrated artifacts; employment claims are sourced and forecasts qualified.
